

HAZARD COMMUNICATION LABEL

GREEN GARD PT™ TREATED WOOD

Hazard warnings for GREEN GARD PT™ treated wood are basically the same as those for untreated wood.

- Airborne wood dust can cause respiratory, eye and skin irritation.
- Breathing wood dust, primarily from hardwood, has been associated with nasal cancer in some studies.
- High airborne dust levels can be an explosion hazard when exposed to an ignition source.
- Use with adequate ventilation and/or respiratory protection.

For additional information, consult the Safety Data Sheet
